EDUCATION

University of Malaya(58th in QS World Ranking)

Master of Artificial Intelligence (Coursework) **October 2025 - Current**

- Focused on advanced AI-driven solutions, deep learning architectures, and applied machine learning methodologies.
- Relevant modules: Advanced Machine Learning, Deep Learning, Natural Language Processing, Computer Vision

University of Southampton Malaysia (87th in QS World Ranking)

Bachelor of Science in Computer Science **October 2022 - June 2025**

- Second Class Honours (Upper Division) – Focused on software development, algorithms, and AI-driven solutions.
- Relevant modules: Programming Language Concepts, Algorithmics, Machine Learning Technologies

CERTIFICATION

- Machine Learning Specialization, DeepLearning.AI (Coursera), Sep 2025
- TensorFlow Developer, DeepLearning.AI (Coursera), March 2025
- Natural Language Processing, DeepLearning.AI (Coursera), Oct 2025
- Generative AI Engineering with LLMs, IBM(Coursera), Dec 2025

PROJECT

Real-Time Face Recognition Attendance System

- Developed a face recognition attendance system using KNN for facial identification, with a React.js frontend, Node.js backend and MongoDB, enabling automated and secure attendance tracking.
- Integrated real-time webcam capture and face embedding extraction, improving attendance accuracy and eliminating manual processes.

Socratic Tutor: AI-Powered Learning Assistant (RAG + LoRA)

- Built a hybrid AI tutor with Next.js, LangChain, MongoDB, and Ollama using the Socratic Method.
- Applied LoRA fine-tuning on Llama-3-8B and RAG over user PDFs for accurate guided learning.
- Enabled vector search, local inference, and real-time streaming via Ollama and Vercel AI SDK.

AI Travel Planner: Personalized Itinerary Generator (Gemini-2.5-flash-lite)

- Built a full-stack travel planner using Next.js, MongoDB, and Vercel to generate and save AI-powered itineraries.
- Used Gemini-2.5-flash-lite to create day-by-day plans based on destination, duration, and budget.
- Implemented user authentication and dashboard storage for secure, responsive access.

Cloud-Based Voting System

- Deployed a React frontend and Node.js backend on Google Cloud Platform (GCP) using Docker, Cloud Run, and Cloud Functions for scalable, serverless vote processing.
- Used Firestore for real-time vote updates and Firebase Auth for secure login.
- Hosted frontend with Firebase Hosting for fast, secure, and seamless deployment.

INTERNSHIP EXPERIENCE

GPIS SOLUTIONS SDN BHD

Software Engineer Internship **June 2024 - September 2024**

- Built a full-stack attendance system using React.js and FastAPI
- Implemented JWT-secured RESTful APIs with PostgreSQL for data storage
- Designed a responsive UI for real-time check-in and improved usability
- Applied Agile methodology using sprint planning, backlog management, and regular reviews

SKILLS

- **Languages & Tools:** Python, Java, SpringBoot, Nextjs, C++, C#, JavaScript, MATLAB, React.js, Node.js, FastAPI, Git, MySQL, MongoDB, Firebase, Google Cloud Platform, Docker
- **Machine Learning & AI:** Machine Learning, Deep Learning, NLP, Computer Vision, Ensemble Learning, LLMs, LoRA, LangChain
- **Libraries:** NumPy, Pandas, OpenCV, scikit-learn, TensorFlow, Keras, Matplotlib, Huggingface
